

ABSTRACT OF THE DISCLOSURE

A portable fencing system in a barricade or corridor arrangement utilizes at a minimum one each of a corner post
5 fixture, and a fence wire. In an enclosure arrangement, the portable fencing system can utilize at least one winch corner fixture, a plurality of corner post fixtures, a plurality of spacer posts and a plurality of fence wires. Spacer posts are spaced from one another and from a winch corner fixture
10 and corner post fixtures such that the winch corner fixture, corner post fixtures, spacer posts and fence wires all together can form any suitable arrangement in relation to one another to provide an enclosure barrier around an area or a barricade or corridor along a side of an area.
